[2017 New Easily Pass 300-208 Exam By Training Lead2pass New Cisco VCE Dumps (151-175)

2017 August Cisco Official New Released 300-208 Dumps in Lead2pass.com! 100% Free Download! 100% Pass Guaranteed!
Lead2pass is constantly updating 300-208 exam dumps. We will provide our customers with the latest and the most accurate exam questions and answers that cover a comprehensive knowledge point, which will help you easily prepare for 300-208 exam and successfully pass your exam. You just need to spend 20-30 hours on studying the exam dumps. Following questions and answers are all new published by Cisco Official Exam Center: https://www.lead2pass.com/300-208.html QUESTION 151Which statement about a distributed Cisco ISE deployment is true? A. It can support up to two monitoring Cisco ISE nodes for high availability.B. It can support up to three load-balanced Administration ISE nodes.C. Policy Service ISE nodes can be configured in a redundant failover configuration.D. The Active Directory servers of Cisco ISE can be configured in a load-balanced configuration.Answer: A QUESTION 152Which Cisco ISE feature can differentiate a corporate endpoint from a personal device? A. EAP chainingB. PAC filesC. authenticated in-band provisioningD. machine authentication Answer: A QUESTION 153Which configuration must you perform on a switch to deploy Cisco ISE in low-impact mode? A. Configure an ingress port ACL on the switchport.B. Configure DHCP snooping globally.C. Configure IP-device tracking.D. Configure BPDU filtering. Answer: A QUESTION 154Which profiling capability allows you to gather and forward network packets to an analyzer? A. collectorB. spannerC. retrieverD. aggregator Answer: A QUESTION 155Which network access device feature can you configure to gather raw endpoint data? A. Device SensorB. Device ClassifierC. Switched Port AnalyzerD. Trust Anchor Answer: A QUESTION 156Which method does Cisco prefer to securely deploy guest wireless access in a BYOD implementation? A. deploying a dedicated Wireless LAN Controller in a DMZB. configuring a guest SSID with WPA2 Enterprise authentication C. configuring guest wireless users to obtain DHCP centrally from the corporate DHCP serverD. disabling guest SSID broadcasting Answer: A QUESTION 157Which mechanism does Cisco ISE use to force a device off the network if it is reported lost or stolen? A. CoAB. dynamic ACLsC. SGACLD. certificate revocation Answer: A QUESTION 158You discover that the Cisco ISE is failing to connect to the Active Directory server. Which option is a possible cause of the problem? A. NTP server time synchronization is configured incorrectly.B. There is a certificate mismatch between Cisco ISE and Active Directory.C. NAT statements required for Active Directory are configured incorrectly.D. The RADIUS authentication ports are being blocked by the firewall. Answer: A QUESTION 159Which type of remediation does Windows Server Update Services provide? A. automatic remediationB. administrator-initiated remediationC. redirect remediationD. central Web auth remediation Answer: A QUESTION 160Which three remediation actions are supported by the Web Agent for Windows? (Choose three.) A. Automatic RemediationB. Message textC. URL LinkD. File DistributionE. AV definition updateF. Launch Program Answer: BCD QUESTION 161What endpoint operating system provides native support for the SPW? A. Apple iOSB. Android OSC. Windows 8D. Mac OS X Answer: A QUESTION 162Which condition triggers wireless authentication? A. NAS-Port-Type is set to IEEE 802.11.B. Framed-Compression is set to None.C. Service-Type is set to Framed.D. Tunnel-Type is set to VLAN. Answer: A QUESTION 163Which feature enables the Cisco ISE DHCP profiling capabilities to determine and enforce authorization policies on mobile devices? A. disabling the DHCP proxy optionB. DHCP option 42C. DHCP snoopingD. DHCP spoofing Answer: A QUESTION 164With which two appliance-based products can Cisco Prime Infrastructure integrate to perform centralized management? (Choose two.) A. Cisco Managed Services EngineB. Cisco Email Security ApplianceC. Cisco Wireless Location ApplianceD. Cisco Content Security ApplianceE. Cisco ISE Answer: AE QUESTION 165Which two options are EAP methods supported by Cisco ISE? (Choose two.) A. EAP-FASTB. EAP-TLSC. EAP-MS-CHAPv2D. EAP-GTC Answer: AB QUESTION 166You configured wired 802.1X with EAP-TLS on Windows machines. The ISE authentication detail report shows "EAP-TLS failed SSL/TLS handshake because of an unknown CA in the client certificates chain." What is the most likely cause of this error? A. The ISE certificate store is missing a CA certificate.B. The Wireless LAN Controller is missing a CA certificate.C. The switch is missing a CA certificate.D. The Windows Active Directory server is missing a CA certificate. Answer: A QUESTION 167What type of identity group is the Blacklist identity group? A. endpointB. userC. blackholeD. quarantineE. denied systems Answer: A QUESTION 168Which feature must you configure on a switch to allow it to redirect wired endpoints to Cisco ISE? A. the http secure-server commandB. RADIUS Attribute 29C. the RADIUS VSA for accountingD. the RADIUS VSA for URL-REDIRECT Answer: A QUESTION 169Lab SimThe Secure-X company has recently successfully tested the 802.1X authentication deployment using the Cisco Catalyst switch and the Cisco ISEv1.2 appliance. Currently, each employee desktop is connected to an 802.1X enabled switch port and is able to use the Cisco AnyConnect NAM 802.1Xsupplicantto log in and connect to the network.Currently, a new testing requirement is to add a network printer to the Fa0/19 switch port and have it connect to the

network. The network printer does not support 802.1X supplicant. The Fa0/19 switch port is now configured to use 802.1X authentication only.To support this network printer, the Fa0/19 switch port configuration needs to be edited to enable the network printer to authenticate using its MAC address. The network printer should also be on VLAN 9.Another network security engineer responsible for managing the Cisco ISE has already per- configured all the requirements on the Cisco ISE, including adding the network printer MAC address to the Cisco ISE endpoint database and etc...Your task in the simulation is to access the Cisco Catalyst Switch console then use the CLI to: - Enable only the Cisco Catalyst Switch Fa0/19 switch port to authenticate the network printer using its MAC address and:- Ensure that MAC address authentication processing is not delayed until 802.1Xfails- Ensure that even if MAC address authentication passes, the switch will still perform 802.1X authentication if requested by a 802.1X supplicant- Use the required show command to verify the MAC address authentication on the Fa0/19 is successful The switch enable password is CiscoFor the purpose of the simulation, to test the network printer, assume the network printer will be unplugged then plugged back into the Fa0/19 switch port after you have finished the required configurations on the Fa0/19 switch port.Note: For this simulation, you will not need and do not have access to the ISE GUI To access the switch CLI, click the Switch icon in the topology diagram Answer: Review the explanation for full configuration and solution.Initial configuration for fa 0/19 that is already done: AAA configuration has already been done for us. We need to configure mac address bypass on this port to achieve the goal stated in the question. To do this we simply need to add this command under the interface: mab Then do a shut/no shut on the interface. Verification: Explanation:1.Ensure that MAC address authentication processing is not delayed until 802.1X fails?authentication order mab dot1x2.Ensure that even if MAC address authentication passes, the switch will still perform 802.1X authentication if requested by a 802.1X supplicant?authentication priority dot1x mab3.Use the required show command to verify the MAC address authentication on the Fa0/19 is successful?show authentication sessions interface fa0/19 configure terminal!!interface fastethernet 0/9mabauthentication order mab dot1xauthentication priority dot1x mabshutdownno shutdown!!end!!show authentication session interface fastethernet 0/9!!Copy running-config startup-config QUESTION 170Lab SimThe Secure-X company has started to tested the 802.1X authentication deployment using the Cisco Catalyst 3560-X layer 3 switch and the Cisco ISEvl2 appliance. Each employee desktop will be connected to the 802.1X enabled switch port and will use the Cisco AnyConnect NAM 802.1X supplicant to log in and connect to the network.Your particular tasks in this simulation are to create a new identity source sequence named AD_internal which will first use the Microsoft Active Directory (AD1) then use the ISE Internal User database. Once the new identity source sequence has been configured, edit the existing DotlX authentication policy to use the new AD_internal identity source sequence.The Microsoft Active Directory (AD1) identity store has already been successfully configured, you just need to reference it in your configuration. In addition to the above, you are also tasked to edit the IT users authorization policy so IT users who successfully authenticated will get the permission of the existing IT_Corp authorization profile.Perform this simulation by accessing the ISE GUI to perform the following tasks: - Create a new identity source sequence named AD_internal to first use the Microsoft Active Directory (AD1) then use the ISE Internal User database- Edit the existing Dot1X authentication policy to use the new AD_internal identity source sequence:- If authentication failed-reject the access request- If user is not found in AD-Drop the request without sending a response- If process failed-Drop the request without sending a response- Edit the IT users authorization policy so IT users who successfully authenticated will get the permission of the existing IT_Corp authorization profile. To access the ISE GUI, click the ISE icon in the topology diagram. To verify your configurations, from the ISE GUI, you should also see the Authentication Succeeded event for the it1 user after you have successfully defined the DotlX authentication policy to use the Microsoft Active Directory first then use the ISE Internal User Database to authenticate the user. And in the Authentication Succeeded event, you should see the IT_Corp authorization profile being applied to the it1 user. If your configuration is not correct and ISE can't authenticate the user against the Microsoft Active Directory, you should see the Authentication Failed event instead for the it1 user.Note: If you make a mistake in the Identity Source Sequence configuration, please delete the Identity Source Sequence then re-add a new one. The edit Identity Source Sequence function is not implemented in this simulation. Answer: Review the explanation for full configuration and solution.Step 1: create a new identity source sequence named AD_internal which will first use the Microsoft Active Directory (AD1) then use the ISE Internal User database as shown below: Step 2: Edit the existing Dot1x policy to use the newly created Identity Source: Then hit Done and save. Explanation:In answer they only create identity source sequence and apply it to policy, but the task is more, we must:1) select Drop in If user not found and If process failed in authentication rule2) set IT_Corp authorization profile for IT users QUESTION 171Hotspot QuestionIn this simulation, you are task to examine the various authentication events using the ISE GUI. For example, you should see events like Authentication succeeded. Authentication failed and etc... Which four statements are correct regarding the event that occurred at 2014-05-07 00:19:07.004? (Choose four.) A. The IT_Corp authorization profile were applied.B. The it1 user was matched to the IT_Corp authorization policy.C. The it1 user supplicant used the PEAP (EAP-MSCHAPv2) authentication method.D. The it1 user was authenticated

using MAB.E. The it1 user was successfully authenticated against AD1 identity store.F. The it1 user machine has been profiled as a Microsoft-Workstation.G. The it1 user machine has passed all the posture assessement tests. Answer: ACEFExplanation:Here are the details shown for this event: QUESTION 172Hotspot QuestionIn this simulation, you are task to examine the various authentication events using the ISE GUI. For example, you should see events like Authentication succeeded. Authentication failed and etc... Which three statements are correct regarding the events with the 20 repeat count that occurred at 2014-05-07 00:22:48.748? (Choose three.) A. The device was successfully authenticated using MAB.B. The device matched the Machine_Corp authorization policy.C. The Print Servers authorization profile were applied.D. The device was profiled as a Linksys-PrintServer.E. The device MAC address is 00:14:BF:70:B5:FB.F. The device is connected to the Gi0/1 switch port and the switch IP address is 10.10.2.2. Answer: ADEExplanation:Event Details: ...continued: QUESTION 173Hotspot QuestionIn this simulation, you are task to examine the various authentication events using the ISE GUI. For example, you should see events like Authentication succeeded. Authentication failed and etc... Which two statements are correct regarding the event that occurred at 2014-05-07 00:22:48.175? (Choose two.) A. The DACL will permit http traffic from any host to 10.10.2.20B. The DACL will permit http traffic from any host to 10.10.3.20C. The DACL will permit icmp traffic from any host to 10.10.2.20D. The DACL will permit icmp traffic from any host to 10.10.3.20E. The DACL will permit https traffic from any host to 10.10.3.20 Answer: AEExplanation:Event Details: QUESTION 174Hotspot QuestionIn this simulation, you are task to examine the various authentication events using the ISE GUI. For example, you should see events like Authentication succeeded. Authentication failed and etc... Which two statements are correct regarding the event that occurred at 2014-05-07 00:16:55.393? (Choose two.) A. The failure reason was user entered the wrong username.B. The supplicant used the PAP authentication method.C. The username entered was it1.D. The user was authenticated against the Active Directory then also against the ISE interal user database and both fails.E. The NAS switch port where the user connected to has a MAC address of 44:03:A7:62:41:7FF. The user is being authenticated using 802.1X.G. The user failed the MAB.H. The supplicant stopped responding to ISE which caused the failure. Answer: CFExplanation:Event Details: QUESTION 175Changes were made to the ISE server while troubleshooting, and now all wireless certificate authentications are failing. Logs indicate an EAP failure. What are the two possible causes of the problem? (Choose two.) A. EAP-TLS is not checked in the Allowed Protocols listB. Client certificate is not included in the Trusted Certificate StoreC. MS-CHAPv2-is not checked in the Allowed Protocols listD. Default rule denies all trafficE. Certificate authentication profile is not configured in the Identity Store Answer: AE Lead2pass is no doubt your best choice. Using the Cisco 300-208 exam dumps can let you improve the efficiency of your studying so that it can help you save much more time. 300-208 new questions on Google Drive: https://drive.google.com/open?id=0B3Syig5i8gpDM1I1WlhIdHJZNjA 2017 Cisco 300-208 exam dumps (All 300 Q&As) from Lead2pass: https://www.lead2pass.com/300-208.html [100% Exam Pass Guaranteed]
