

Free Sharing Microsoft 70-413 187q Exam VCE And PDF With All New Exam Questions (31-40)

[New VCE and PDF] You can prepare Microsoft 70-413 exam in an easy way with Lead2pass 70-413 187q questions and answers. By training our vce dumps with all the latest questions, you can pass the exam in the first attempt. QUESTION 30 You need to recommend a solution that meets the security requirements. Which schema attribute properties should you recommend modifying? A. isCriticalSystemObject B. searchFlags C. schemaFlagsEx D. isIndexed Answer: B Explanation: Applies To: Windows Server 2008, Windows Server 2012 This topic includes procedures for adding an attribute to the filtered attribute set (FAS) for a readonly domain controller (RODC) and marking the attribute as confidential data. You can perform these procedures to exclude specific data from replicating to RODCs in the forest. Because the data is not replicated to any RODCs, you can be assured that the data will not be revealed to an attacker who manages to successfully compromise an RODC. In most cases, adding an attribute to the RODC FAS is completed by the developer of the application that added the attribute to the schema. ? Determine and then modify the current searchFlags value of an attribute ? Verify that an attribute is added to the RODC FAS - Determine and then modify the current searchFlags value of an attribute To add an attribute to an RODC FAS, you must first determine the current searchFlags value of the attribute that you want to add, and then set the following values for searchFlags: ? To add the attribute to the RODC FAS, set the 10th bit to 0x200. ? To mark the attribute as confidential, set the 7th bit to 0x080.

[http://technet.microsoft.com/en-us/library/cc754794\(v=ws.10\).aspx](http://technet.microsoft.com/en-us/library/cc754794(v=ws.10).aspx) QUESTION 31 You need to recommend a Group Policy strategy to support the company's planned changes. What should you include in the recommendation? A. Link a Group Policy object (GPO) to the AllComputers OU in each domain. B. Link a Group Policy object (GPO) to litwareinc.com and configure filtering. C. Link a Group Policy object (GPO) to each domain. D. Link a Group Policy object (GPO) to the Boston site. Answer: D Explanation: QUESTION 32 You need to ensure that NAP meets the technical requirements. Which role services should you install? A. Network Policy Server, Health Registration Authority and Host Credential Authorization Protocol B. Health Registration Authority, Host Credential Authorization Protocol and Online Responder C. Certification Authority, Network Policy Server and Health Registration Authority D. Online Responder, Certification Authority and Network Policy Server Answer: C Explanation: Health Registration Authority Applies To: Windows Server 2008 R2, Windows Server 2012 Health Registration Authority (HRA) is a component of a Network Access Protection (NAP) infrastructure that plays a central role in NAP Internet Protocol security (IPsec) enforcement. HRA obtains health certificates on behalf of NAP clients when they are compliant with network health requirements. These health certificates authenticate NAP clients for Ipsecprotected communications with other NAP clients on an intranet. If a NAP client does not have a health certificate, the IPsec peer authentication fails and the NAP client cannot initiate communication with other IPsec-protected computers on the network. HRA is installed on a computer that is also running Network Policy Server (NPS) and Internet Information Services (IIS). If they are not already installed, these services will be added when you install HRA. <http://technet.microsoft.com/en-us/library/cc732365.aspx> QUESTION 33 You need to recommend a change to the Active Directory environment to support the company's planned changes. What should you include in the recommendation? A. Upgrade the domain controllers that have the PDC emulator master role to Windows Server 2012. B. Raise the functional level of the domain and the forest. C. Implement Administrator Role Separation. D. Upgrade the domain controller that has the domain naming master role to Windows Server 2012. Answer: B Explanation: From case study: * Implement the Active Directory Recycle Bin. QUESTION 34 You need to recommend changes to the Active Directory environment to support the visualization requirements. What should you include in the recommendation? A. Raise the functional level of the domain and the forest. B. Implement Administrator Role Separation. C. Upgrade the domain controllers that have the PDC emulator master role to Windows Server 2012. D. Upgrade the domain controller that has the domain naming master role to Windows Server 2012. Answer: C Explanation: From case study: * Ensure that the additional domain controllers for the branch offices can be deployed by using domain controller cloning. Case Study 4 - Northwind Traders (Question 35 - Question 44) Overview Northwind Traders is a retail company. The company has offices in Montreal and San Diego. The office in Montreal has 1,000 client computers. The office in San Diego has 100 computers. The computers in the San Diego office are often replaced. The offices connect to each other by using a slow WAN link. Each office connects directly to the Internet. Existing Environment Active Directory Environment The network contains an Active Directory forest named northwindtraders.com. The forest contains two domains named northwindtraders.com and west.northwindtraders.com. All servers run Windows Server 2012 R2. All client computers run Windows 7. Each office is configured as an Active Directory site. The site in the Montreal office is named Site1. The site in the San Diego office is named Site2. The forest contains four domain controllers. The domain controllers are configured as shown in the following table. DC1, DC2, and DC3 are writable domain controllers. RODC1 is read-only domain controller (RODC). All DNS zones are

Active Directory-integrated. All zones replicate to all of the domain controllers. All of the computers in the San Diego office are configured to use RODC1 as their only DNS server. The northwindtraders.com domain contains a Group Policy object (GPO) named GPO1. GPO1 is applied to all of the users in the Montreal office. All of the user accounts for the Montreal users are in the northwindtraders.com domain. All of the user accounts for the San Diego users are in the west.northwindtraders.com domain. Network Environment Site1 contains the member servers in the northwindtraders.com domain shown in the following table. Server1 connects to SAN storage that supports Offloaded Data Transfer (ODX). All virtual hard disks (VHDs) are stored on the SAN. A web application named App1 is installed on Servers. Server3 has a shared folder that contains sales reports. The sales reports are read frequently by the users in both offices. The reports are generated automatically once per week by an enterprise resource planning (ERP) system. A perimeter network in the Montreal office contains two standalone servers. The servers are configured as shown in the following table. The servers in the perimeter network are accessible from the Internet by using a domain name suffix of public.northwindtraders.com. Each administrator has a management computer that runs Windows 8.1. Requirements Planned Changes Northwind Traders plans to implement the following changes: On Server1, create four virtual machines that run Windows Server 2012 R2. The servers will be configured as shown in the following table. - Configure IP routing between Site1 and the network services that Northwind Traders hosts in Windows Azure. - Place a domain controller for the northwindtraders.com domain in Windows Azure. - Upgrade all of the computers in the Montreal office to Windows 8.1. - Purchase a subscription to Microsoft Office 365. - Configure a web application proxy on Server6. - Configure integration between VMM and IPAM. - Apply GPO1 to all of the San Diego users. - Connect Site1 to Windows Azure. Technical Requirements Northwind Traders must meet the following technical requirements: - All virtual machines must use ODX. - Users must be able to access App1 from the Internet. - GPO1 must not be applied to computers that run Windows 8.1. - All DNS zones must replicate only to DC1, DC2, and DC3. - All computers must be able to resolve names by using a local DNS server. - If a WAN link fails, users must be able to access all of the sales reports. - The credentials for accessing Windows Azure must be permanently stored. - The on-premises network must be connected to Windows Azure by using Server4. - The administrators must be able to manage Windows Azure by using Windows PowerShell. - The number of servers and services deployed in the San Diego office must be minimized. - Active Directory queries for the objects in the forest must not generate WAN traffic, whenever possible. Security Requirements Northwind Traders identifies the following security requirements: - Ensure that all DNS zone data is encrypted when it is replicated. - Minimize the number of permissions assigned to users and administrators, whenever possible. - Prevent an Active Directory Domain Services (AD DS) attribute named SSNumber from replicating to Site2. - Ensure that users can use their northwindtraders.com user account to access the resources hosted in Office 365. - Prevent administrators from being required to re-enter their credentials when they manage Windows Azure from approved management computers. QUESTION 35 You need to recommend an Office 365 integration solution. What should you include in the recommendation? A. Active Directory directory synchronization B. The Active Directory Migration Tool (ADMT) C. Windows Identity Foundation (WIF) 3.5 D. The Sync Framework Toolkit Answer: A QUESTION 36 You need to recommend a solution for the sales reports. What should you include in the recommendation? A. BranchCache in distributed cache mode B. Offline files C. BranchCache in hosted cache mode D. Distributed File System (DFS) Answer: A QUESTION 37 Hotspot Question You are evaluating the virtual machine environment. In the table below, identify which virtual machines currently support ODX and which virtual machines require a configuration change to support ODX. Make only one selection in each row.

Virtual machine
VM1
VM2
VM3
VM4

Answer:

Virtual machine	Currently supports ODX	Requires a configuration change to support ODX
VM1	<input type="radio"/>	<input checked="" type="radio"/>
VM2	<input checked="" type="radio"/>	<input type="radio"/>
VM3	<input checked="" type="radio"/>	<input type="radio"/>
VM4	<input checked="" type="radio"/>	<input type="radio"/>

QUESTION 38 You need to recommend a solution for GPO1. What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer. A. In west.northwindtraders.com, create a copy of GPO1 and link the new GPO to Site2. Apply a WMI filter to the new GPO. B. In west.northwindtraders.com, create a copy of GPO1 and link the new GPO to west.northwindtraders.com. Configure security filtering on the new GPO. C. Link GPO1 to west.northwindtraders.com and configure security filtering on GPO1. D. Link GPO1 to Site2 and apply a WMI filter to GPO1. Answer: D QUESTION 39 You need to recommend a solution for the replication of Active Directory. What should you recommend modifying? A. The Active Directory Schema B. The properties of Site1 C. The RODC1 computer account D. The properties of Site2 Answer: A QUESTION 40 Drag and Drop Question You need to recommend a solution for managing Windows Azure. Which three actions should you recommend performing in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Run the Import-AzurePublishSettingsFile cmdlet.	
Run the Add-AzureAccount cmdlet.	
Run the Set-AzureStorageAccount cmdlet.	
Run the Microsoft Web Platform Installer (Web PI).	
Run the Register-PSSessionConfiguration cmdlet.	
Run the Get-AzurePublishSettingsFile cmdlet.	
Install Microsoft .NET Framework 3.5.	

Answer:

Actions	Answer Area
Run the Import-AzurePublishSettingsFile cmdlet.	Run the Get-AzurePublishSettingsFile cmdlet.
Run the Add-AzureAccount cmdlet.	Run the Import-AzurePublishSettingsFile cmdlet.
Run the Set-AzureStorageAccount cmdlet.	Run the Set-AzureStorageAccount cmdlet.
Run the Microsoft Web Platform Installer (Web PI).	
Run the Register-PSSessionConfiguration cmdlet.	
Run the Get-AzurePublishSettingsFile cmdlet.	
Install Microsoft .NET Framework 3.5.
